

Not just for Parkinson's disease

Did you know... the intensive and neuroplasticity-based LSVT LOUD treatment can address a range of communication impairments in school-aged children with motor speech disorders?

What is LSVT LOUD?

LSVT LOUD is a treatment program originally developed for adults with Parkinson's. It also has been found to be effective in helping improve speech and communication in children with cerebral palsy and Down syndrome.

Scan QR code with phone camera to view full LSVT LOUD pediatric reference list.

Families reported their children with DS were easier to understand, more talkative, more fluent, and had multiple unsolicited feedback from teachers, friends, and other family members, about these changes.
